BLAGI PAD CIJENA NA STOČNIM PIJACAMA

U trećoj sedmici avgusta kretanje cijena i ponude je očekivano za ovaj period godine.

Ovaj period godine karakteriše dobra ponuda podmlatka (jagnjadi, jaradi, teladi i nešto slabije prasadi).

Cijena jagnjadi u odnosu na prethodne sedmice je u blagom padu i najniža je bila u Beranama (2€/kg žive mjere) a najveća u Baru (2,6€/kg žive mjere) Slična situacija je i kod jaradi što je očekivano jer porastom tjelesne mase dolazi do blagog pada cijene podmlatka.

Ponuda teladi iz domaće populacije je dobra a cijena je na istom nivou kao i prethodne sedmice (2,73€/kg žive mjere). Najniža cijena je bila u Beranama (2,5€/kg žive mjere) a najviša u Podgorici (3€/kg žive mjere).

Priplodne krave su se uglavnom prodavale na farmama i ponuda u ovom periodu nije velika. Izlučene krave za klanje su prodavane na stočnim pijacama i cijena se kretala od 0,8-1€/kg žive mjere a simentalaska rasa i do 1,2€.

PRIPUST PRIPLODNIH JUNICA

Kod junica ostavljenih za priplod razlikujemo polnu i priplodnu zrelost. Polna zrelost ili nagon se javlja kod junica u različitom dobu života, zavisno od stepena stasavanja rase kojoj pripada. Priplodna zrelost se dostiže kada junica dostigne i odgovarajuću tjelesnu zrelost. Iz ekonomskih razloga potrebno je da se prvo oplodavanje izvede u vrijeme kada je to najprikladnije za životinju i njenu kasniju mliječnost.

Ako se prva oplodnja obavi rano, prije priplodne zrelosti, doći će do usporavanja razvitka grla što ima za posljedicu umanjivanje njegove proizvodne vrijednosti. Rano pripuštene junice rađaju manje vitalnu telad, lakšu i daju manje mlijeka u prvoj laktaciji. Slabo razvijena, rano pripuštena junica, u toku života ne može dobro da se razvije.

Slično ranom pripustu nije poželjan ni previše kasni pripust. Ovime dobijamo previše krupne junice koje kasne sa teljenjem i proizvodnjom mlijeka pa su ekonomski manje isplative. Takođe se kod njih često javljaju problemi pri teljenju pa može doći do jalovosti. Suvviše kasno pripuštene junice su sklone gojaznosti pa često ostaju neplodne. Kada se oteli gojazna junica daje manje mlijeka jer u vimenu ima mnogo masnog tkiva.

Vrijeme prvog pripusta zavisi od stepena stasavanja rase kojoj junica pripada.

Junice smeđe rase poželjno je pripustiti u 14 – 16 mjesecu starosti, holštajn – frizijske i simentalca u 16 – 18 mjesecu dok je za bušu idealno vrijeme od 24 – 28 mjeseci starosti.

Međutim, kada se govori o najpodesnijem momentu za prvu oplodnju pogrešno je odlučivati samo na osnovu starosti. Junica mora da postigne i odgovarajuću tjelesnu razvijenost što se nekad ne poklapa sa starošću. Tjelesna razvijenost je postignuta onda kada junica ima dvije trećine tjelesne mase od odraslih grla rese kojoj pripada. To znači da, ako su krave u odraslom stanju sa tjelesnom masom od 550 do 600 kg njihove junice treba pripustiti kada imaju tjelesnu masu od 360 do 400 kg.
