Stanje na stočnim pijacama u avgustu	2
Pregled cijena žive stoke	3-7
Odabir grla za priplod u kozarstvu	8

CIJENE I DALJE U PADU

I u toku predhodne nedjelje nastavljen je pad cijena žive stoke na stočnim pijacama.

Najveći pad cijene je zabilježen kod jagnjadi kojima je cijena u odnosu na predhodnu nedjelju niža za 0,16€ i kod

prasadi gdje je cijena niža za 0,1€. Pad cijena je primjetan i kod teladi do 160 kg, krava za klanje, ovnova i jaradi.

Ponuda na pijacama je bila relativno dobra osim na pijaci u Pljevljima gdje je u ponudi bilo pet vrsta stoke.

ODABIR GRILA ZA PRIPLIOD U KOZARSTVU

Svake godine prije početka sezone parenja, koja obično počinje početkom septembra, vrši se odabir koza za priplod. Godišnje se iz stada isključi (remontuje) oko 20% koza, i to sve bolesne, stare, jalove i koze sa niskom proizvodnjom.

U cilju provođenja pravilne selekcije, odgajivač treba da vodi evidenciju o proizvodnji, i sva grla u stadu da obilježi. Pri selekciji na veću proizvodnju mlijeka, kao mjerilo se može koristiti najveća količina mlijeka koju koza ostvari u toku jedne laktacije, a za izbor priplodnih jarčeva (koji će se koristiti za parenje koza) najveća količina mlijeka koju u toku laktacije ostvare njihove majke.

Kod odabiranja za prvi pripust treba se pridržavati sljedećih pravila:

- ženska jarad ne treba da se pare prije uzrasta od 8 mjeseci, pod uslovom da imaju masu tijela minimalno 30 kg;
- mušku jarad ne treba puštati u priplod prije navršenih 8 mjeseci, a i tada samo u manjem obimu. Mlade jarčeve treba uključiti u pripust u većem obimu kad dostignu jednu i po do dvije godine. Dobri jarčevi mogu da se koriste u priplodu i do 8 pa i više godina, ali ne u istom stadu. Isti jarac ne treba da se koristi za priplod u istom stadu duže od dvije godine zbog toga što mu stasavaju kćerke i što bi došlo do pojave parenja u najužem srodstvu. Stoga će pravilna selekcija podrazumijevati i nabavku određenog broja jarčeva sa strane.
