Otkup jagnjadi u Pljevljima	2
Pregled cijena žive stoke	3-7
Uticaj ishrane na zdravstveno stanje krava	8

DOBAR OTKUP JAGNJADI U PLJEVLJIMA

U toku predhodne nedjelje u Pljevljima je otkupljeno 1200 jagnjadi. Otkup jagnjadi je organizovan sa subjektima mesne industrije, a u Pljevljima otkup organizuje Meopromet iz Bijelog Polja. Cijena jagnjadi u otkupu u Pljevljima je bila 2,05€ dok se na pijaci kretala od 1,9 do 2,05€. U drugim opštinama cijena jagnjadi se kretala od 2 - 2,3€.

Ostale cijene su zadržane na približno istom nivou kao i prethodne nedjelje osim simentalskih teladi kojima je cijena ove nedjelje niža za 0,33€ i ove nedjelje se kretala od 1,9€ u Podgorici do 2,7€ u Bijelom Polju.

UTICAJ ISHRANE NA ZDRAVSTVENO STANJE KRAVA

Ishrana je jedan od najznačajnijih činilaca u razvoju svih živih bića, pa i goveda. Ona utiče na izgradnju životinjskog tijela, na priplodnu sposobnost krava i zdravstveno stanje životinja.

Uticaj pravilne ishrane na produktivnost i zdravstveno stanje krava poznat je stočarima koji su nabavili visoko produktivna grla, ali su zadržali iste uslove držanja i ishrane, pa ta grla nijesu dala očekivane rezultate. Visoko produktivna grla plemenite rase goveda i njihovo potomstvo, pod uslovima loše njege i ishrane, poslije nekoliko generacija poprimaju iste oblike i produktivnost kao i primitivne rase.

Pravilna ishrana krava muzara utiče ne samo na produktivnost već i na povećanje otpornosti životinjskog organizma koji se lakše odupire bolestima.

Takođe, pravilna ishrana utiče i na redovnu plodnost. Na to utiče ne samo izbalansirani obrok, koji treba da sadrži potrebne hranljive količine bjelančevina i ugljenih hidrata, već i određene količine

mineralnih materija (kalcijum, fosfor) i vitamina.

Pravilna ishrana krava je posebno značajna u periodu zasušenosti i prvih sto dana poslije teljenja, jer znatno utiče na postizanje maksimalne mliječnosti i dobro zdravlje krava. Ishrana krava u vrijeme zasušenosti treba da obezbijedi njihovom organizmu odgovarajuću kondiciju za slijedeću laktaciju. Naime, teljenje i prvi mjesec laktacije predstavljaju kritični period u životu krave, jer osim teškoće koju predstavlja samo teljenje, odmah poslije njega često dolazi do zadržavanja posteljice (placente), otoka (edema) vimena, mliječne groznice, promjene položaja (dislokacije) sirišta i do pojave takozvane »masne jetre«.

Pravilnom ishranom u periodu zasušenosti može se postići da se skoro u potpunosti isključi potreba da se u završnom periodu steonosti, zbog povećanih potreba za razvojem ploda, koriste tjelesne rezerve organizma krave a takođe se sprječavaju nepotrebni troškovi angažovanja veterinarara.
