PONUĐA NA STOČNIM PIJACAMA

Slaba ponuda junica u Beranama i Bijelom Polju

U Beranama i Bijelom Polju je u toku prethodne nedjelje ponuđeno 3 junice: u Beranama dvije sa cijenom od 1100€ i u Bijelom Polju jedna sa cijenom od 800 €.

Na pijaci u Podgorici i dalje najviše prasadi (150 grla) sa cijenom od 2,2 do 2,5€/kg žive mjere.

Ponuda stoke kao i tražnja na stočnoj pijaci u Pljevljima je i dalje slaba. Na pijaci u Baru u ponudi je bilo 10 prasadi sa cijenom od 2,5€/kg žive mjere a ostalih vrsta je bilo u ponudi na farmama.

U Nikšiću je u ponudi bilo najviše priplodnih ovaca (30 grla sa cijenom od 100 do 120€/grlu). Na pijaci nije bilo ponude.

Bar

Cijena teladi je imala mali pad u odnosu na prethodnu nedjelju a cijene ostalih kategorija su bez bitnih promjena.

I ove nedjelje ponuda na pijacama bila je slaba i uglavnom se trgovalo na farmama.

Berane

Ponuda, tražnja i cjenovni trend na stočnoj pijaci u Beranama su na nivou od prošle sedmice.

Nikšić

Kao i prethodnih nedjelja, nije bilo ponude žive stoke na stočnoj pijaci u Nikšiću. Cijene su uzete direktno od farmera. Ove nedjelje je zabilježen blagi rast cijene junadi do 300 kg i ona se kretala do 2,1€ po kg žive mjere. Kod prasadi je zabilježen blagi pad cijene. Cijena priplodnih ovaca sa jednim jagnjetom je bila do 150€, a sa dva jagnjeta i do 200€. Cijena priplodnih koza sa jednim jaretom je u prosjeku bila oko 110€, dok je koza sa dva jareta

prodavana i do 150€. Ostale cijene su na prošlonedjeljnom nivou.

Pljevlja

Na svim pijacama u Pljevljima i dalje veoma loša ponuda stoke, a kupaca skoro da i nema. Veoma malo se trgovalo i na farmama. Cijene su uzete od farmera i kretale su se na prošlonedjeljnom nivou.

Bijelo Polje

U toku ove sedmice primjetan je rast ponude pojedinih vrsta i kategorija stoke. To se prije svega odnosi na priplodne krave i ovce, telad meleze, a takođe i mladih jagnjadi.

Cijene su i dalje bez bitnijih promjena, osim kod jagnjadi gdje primjetan rast.

Podgorica

Period slabe ponude na podgoričkoj stočnoj pijaci nastavljen i ovog ponedjeljka. Naime, u ponudi osim prasadi kojih je bilo oko 150 komada a čija se cijena kretala od 2,2 do 2,5€ po kg žive mjere, drugih kategorija i vrsta stoke bilo je veoma malo. Bilježimo i par grla bez ušnih markica kojima nije dozvoljen ulazak na pijacu a kako smo saznali od dežurnog veterinara ukoliko se desi da naredni put vlasnici nasilno uđu u krug pijace ta grla će biti zaplijenjena.

REPUBLIKA CRNA GORA MINISTARSTVO POLJOPRIVREDE, ŠUMARSTVA I VODOPRIVREDE

IZVJEŠTAJ O CIJENAMA ŽIVE STOKE

TEHNIKE PRIPUSTA OVACA

- **Divlje parenje** ovaca je karakteristično za primitivnije rase i ekstenzivno ovčarstvo. Tu se ovnovi puštaju među ovce, ne planirajući ni koji će ovan koju ovcu oploditi ni datum parenja. Ovnovi više puta skaču na pojedine ovce, previše se iscrpljuju i kratko se zadržavaju u priplodu. Tom prilikom izvesna malda grla bivaju oplođena prije vremena. Na jednog odraslog ovna dolazi 20-25 ovaca, najviše 40 ovaca, a na dvisca 10-15 ovaca.

- **Haremsko parenje** je bolje od divljeg načinajer se ovdje jedan priplodnjak odredi tačno određenom broju plotkinja (40 do 50). Pri ovom načinu parenja zna se od kojeg je priplodnjaka potomstvo, ali se ne zna datum osjemenjavanja. Ovce se moraju držati u većem broju grupa, pa je stoga najlakše parenje organizovati ako se pripust vrši samo u toru (2 sata ujutro i 2 sata uveče).

- **Klasno parenje** vrši se na taj način što se ovce dele na grupe-klase, u zavisnosti od kvaliteta njihovih osobina. Svakoj grupi se dodijele ovnovi da bi se izvršila korekcija određenih osobina (gustina vune, dužina pramena, finoća vlakna, težina tela, širina grudi, ugnuće leđa). Kod ovakvog načina parenja na jednog ovna dodeljuje se 40-60 ovaca, ali ni u ovom slučaju ne zna tačno vrijeme parenja ovaca.

- **Individualno parenje ili parenje iz ruke** se u savremenom ovčarstvu najviše primjenjuje. Svakoj pojedinačno plotkinji se dodjeljuje odgovarajući priplodnjak, tako da se vrši se odabir roditeljskih parova. Koristi se u zapaćima gdje se provodi uzgajivaćko selekcijski rad. Ovo je dosta zahtjevna i skupa metoda jer se životinje svo vrijeme moraju držati u štali. U ovom načinu pripusta na 1 ovna može doći i do 80 ovaca.
