JEČAM

Ječam je najrasprostranjenije žito na svijetu, a najznačajniji je za hladnija i vlažnija područja, gdje se ne može gajiti kukuruz za zrno. Mada su neki stručnjaci protiv ovakve podjele, sa gledišta ishrane životinja podjela je izvršena na sorte ječma za pivo (sadrže 6-10% proteina), i sorte za hranu za životinje (sadrže 10-15% proteina). Postoje ozime i jare forme ječma, i to dvorede, četvororede i šestorede.

Proteini ječma su lošeg aminokisjelinskog sastava, ali nešto bolji u odnosu na proteine kukuruza.

Siromašni su u lizinu i metioninu, mada ima i lizinskih sorti ječma. Ječam ima

manju koncentraciju energije (sadrži manje skroba) i više sirove celuloze u odnosu na kukuruz. Pljevica ječma koja obavija zrno čini 14-15 % od težine zrna i u njoj se nalazi oko 5,4% celuloze. Ljuštenje ječma nije uobičajeno, mada se u nekim zemljama i to praktikuje. Ječam bez ljuske sadrži za oko 10% više energije u odnosu na neoljušteno zrno.

U obrocima za svinje ječam se može koristiti bez ikakvih ograničenja kao jedini, ili osnovni izvor energije. U ishrani živine ječam se koristi u manjoj količini, jer može izazvati poremećaje u varenju hrane. Obilna i duža ishrana krava muzara ječmom može da dovede do naduva.
